PROTEX

DESIGN & COLOR FLEXIBLE

Characteristics of PROTEX

- PROTEX is reinforcing material for hard gear use.
- You can see three dimensioned small dots that are produced by traditional excellent abrasion method.
- The dots are made from acrylic resin that is printed three times on the nylon tricot fabric.
- This three times printing makes 3D dots, and this technique is based on the Japanese traditional printing - Yuzen for kimono (hand print).
- We started business with famous brands for rider wear's and other hard application like knee patch.
- Various brands love this article not only durable but also the unique looks.
- Hot-melt film is finished on the backside and laminated by hot press.
