

# Eclat Materials

# Eclat Primefit Zero

Longer lasting stretch. Zerospandex. This material's fine furrow structure is composed of highly compressed strands of flexuous yarns. They maximize its stretch and inhibit the loss of elasticity. Primefit Zero is the performance essential. It features much-needed functions for rapid motion. And has a smooth yet muted natural appearance fitted for tops.

# Primefit Zero

## Features

Mono-material  
Naturally flexible and breathable material  
Engineered raised structures to reduce cling

# Eclat Solution-dyeing

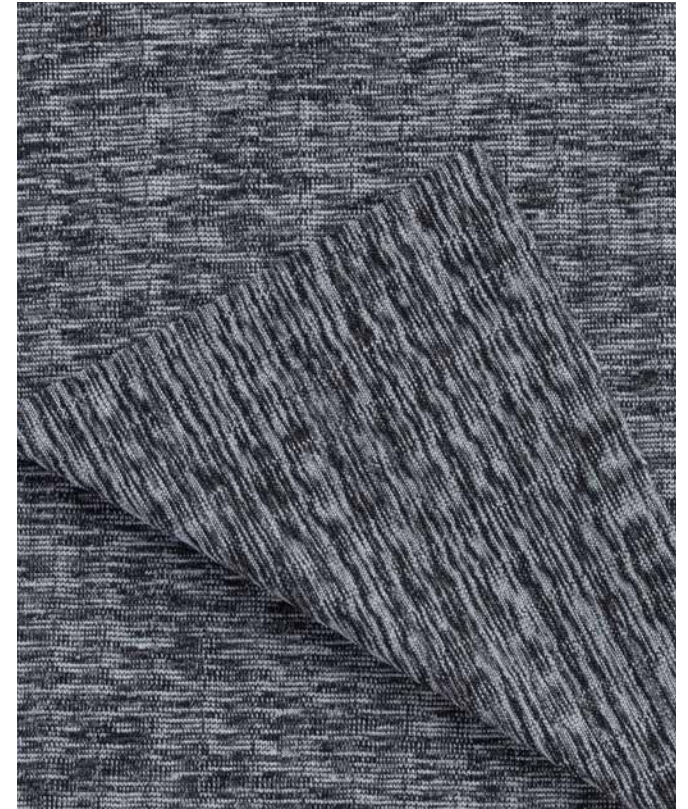

Solution-dyeing makes the color completely integrated into molten plastic before making the fiber. It protects the vibrant color wash after wash. And the material delivers high performance and comfort with less water consumption.

Furthermore, our solution-dyed fabric can be made of recycled polyester, and it retains the rich color and functionality as well as virgin polyester. Optimized for running, fitness, trekking, and hiking.
