Recycled Yarn
Nylon & Polyester

Going Green Is Cool with brrr° Recycled Yarns

Every day, millions of plastic bottles and thousands of tons of nylon waste end up in landfills. Recycling these materials into polyester or nylon yarn saves energy, reduces carbon emissions and prolongs landfill life.

Cooling Comfort that Benefits the Environment

brrr° recycled yarn combines our patented cooling technology with nylon and polyester from sources that are GRS (Global Recycled Standards) Certified to create recycled fabric that is truly cool.

Superior Cooling with a Purpose

brrr° combines natural cooling minerals with active wicking and rapid drying to create a powerful Triple Chill Effect® that draws heat and moisture away from your skin to keep you feeling comfortable throughout your day. brrr° recycled fabrics have been tested and validated by independent laboratories with superior cooling results.

Be Cool by Making a Difference

brrr° recycled yarns and fabrics give your product an eco-friendly story while also giving your customers a truly unique cooling experience.

About Our Product:

GRS Certified sources of recycled nylon and polyester

brrr°'s patented Triple Chill Effect® technology is permanently embedded in every recycled fiber

Proven cooling performance validated by independent laboratories
